

## Microfiltration Systems

The SMT Disc systems are a high quality microfiltration system, featuring stainless steel construction and a built in **backwashing system**, inspection covers and automatic controls, Surface areas range from 12 to 125m<sup>2</sup>, with maximum flow rates from: 1 to 8.6L/sec.

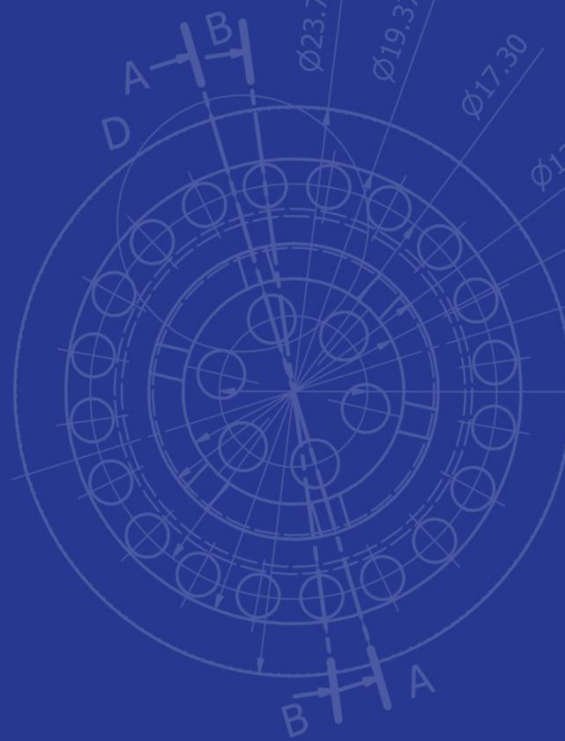

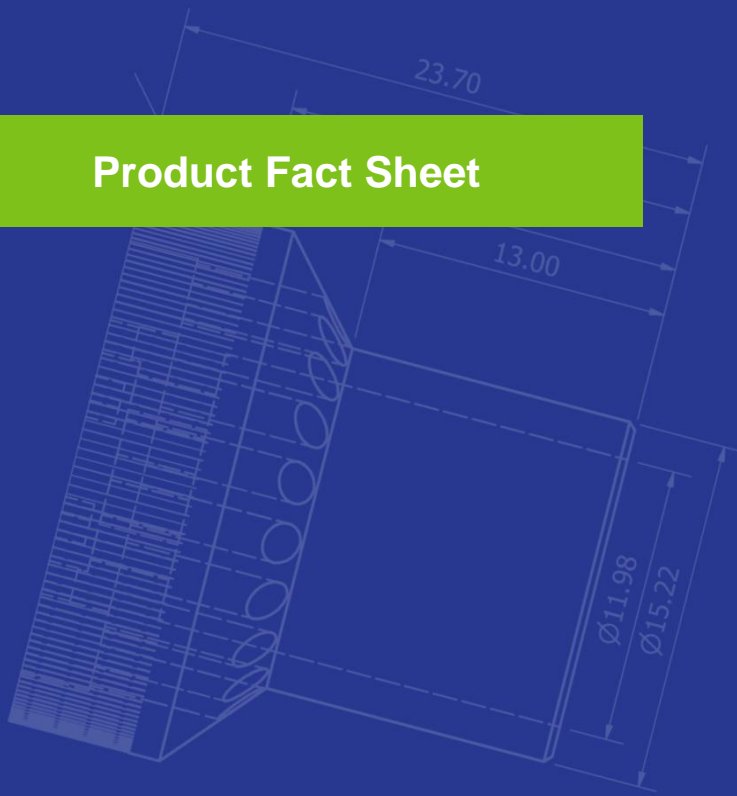

## Media filtration

Media Filtration systems function through physical capture of pollutants, as well as adsorption of pollutants through chemical reactions. We offer a variety of media sources including; Quartz sand, Silica sand, Glass media, Zeolite, Anthracite coal, Garnet, Magnetite, etc.

Our media filtration systems can be supplied loose or packaged up on a skid system with pre-coagulation and post disinfection etc.
